The VaxCare Mobile Hub helps our customers ensure accurate vaccine administration.
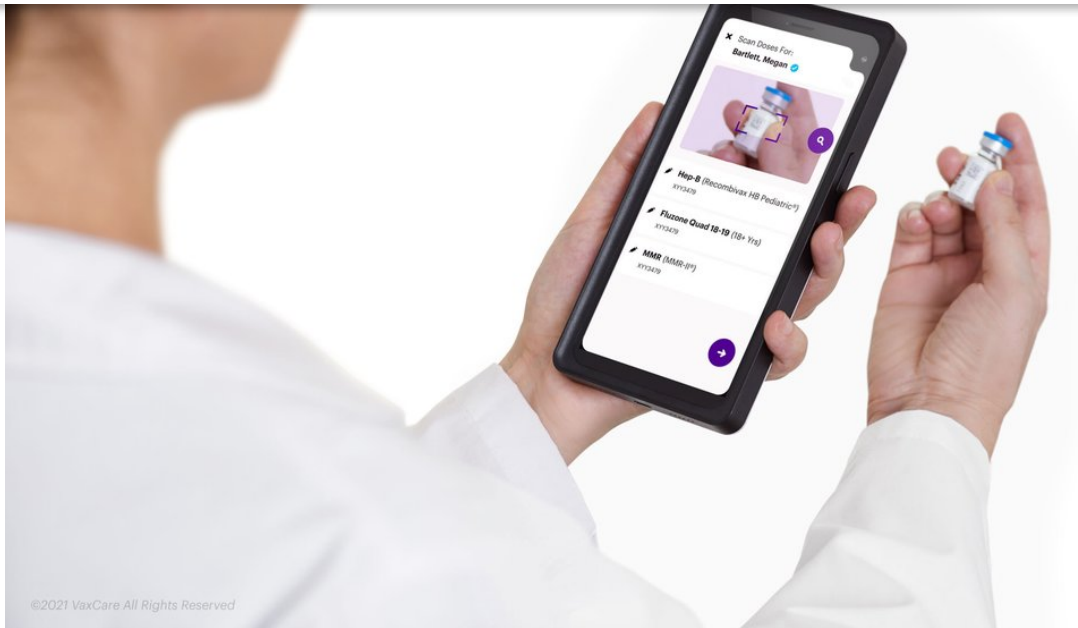

Having this vital information readily available in this purpose-built, rugged device has produced efficiency for our network of over 10,000 providers. Since launching the Mobile Hub device in September 2020, they administered over 650,000 flu shots during the 2020 season. One partner practice saw their immunization rates increase 54 percent year-over-year.

Flexible management solutions

Android Enterprise provides comprehensive tools for rapid and secure device enrollment and flexible management, which we enable for our devices through Social Mobile's Enterprise Mobility Management (EMM) platform, Mambo.

With zero-touch enrollment, we enable a quick and simple device startup experience for customers. After unboxing and powering on the device, it's automatically enrolled and configured for use with our application. Devices are managed in lock task mode, which locks a device to a specific set of apps, so customers are always connected to our VaxCare Portal.

Security and privacy are critical to any healthcare setting. As a device with Google Mobile Services, the VaxCare Hub and Mobile Hub use Android multi-layered security to continually monitor and protect critical data. We have confidence in the platform security
